

CampusFind (134706)

Repo: <https://github.com/IS-PROJECT-2026/campusfind-134706>

3. Reflection

A. Your Best Commit

Commit URL: <https://github.com/IS-PROJECT-2026/campusfind-134706/commit/858348b330ebdbc9c439451030cea2a58ef9b7ef>

Why this one? It's a clean conventional commit - feat(storage): add localStorage CRUD and seed data - with a scoped type/subject and a body explaining what was implemented (item schema, session tracking, seed data), plus Closes #4 and Closes #5 in the footer so it auto-links two tracking issues instead of one vague reference.

B. A Mistake or Struggle

Link to the evidence: <https://github.com/IS-PROJECT-2026/campusfind-134706/commit/156e8dc2e179e4f329e617d89c0c311f439f90f8> (PR: <https://github.com/IS-PROJECT-2026/campusfind-134706/pull/12>)

What happened and how did you recover? The matching algorithm in js/matching.js could return a negative score once penalty conditions stacked up, which silently broke downstream match detection (negative scores sorted above valid ones). I caught it while testing edge cases, opened fix/12-match-threshold, and fixed it with a one-line clamp (`Math.max(0, score)`), then merged it back via PR #12 referencing the fix.

C. A Pull Request You're Proud Of

PR URL: <https://github.com/IS-PROJECT-2026/campusfind-134706/pull/11>

What did you check before merging? PR #11 (feat: my reports) adds a single, self-contained file (js/my-reports.js, 89 lines, no unrelated changes) and its description correctly closes both issues it addresses (Closes #13, Closes #14). Before merging I checked the diff only touched the

reports page logic, that the status-action handlers (mark recovered / close / delete) didn't leak into other pages, and that the issue links matched what was actually implemented.

D. One Thing You Would Do Differently

What would you change? Enforce a consistent branch-naming/remote convention from commit one. Every other PR in the history merges from IS-PROJECT-2026/<branch-name>, but PR #3 merged from a bare feat/4-storage-layer ref without the org prefix, which is a small but avoidable inconsistency in an otherwise uniform naming scheme (type/issue-number-short-description).

Link to the evidence of the original decision: <https://github.com/IS-PROJECT-2026/campusfind-134706/commit/043563929261dcc2c23f7e864413a86dfb541748> (merge commit for PR #3: "Merge pull request #3 from feat/4-storage-layer")

4. Screenshots of Key GitHub Features

Demonstrate your workflow mechanics by embedding your screenshots below. Edit this file directly on the GitHub web interface, click the blank line under each prompt, and paste (Ctrl+V / Cmd+V) your screenshot so GitHub generates a working image link.

A. Milestones and Issues

Provide a screenshot showing your active milestone(s) and the granular tracking issues linked directly to them.

Caption: Three milestones track the build in phases "Foundation & Data Layer" (5 issues), "Core User Features" (6 issues, e.g. #28 browse/search, #29 filters, #30 item details), and "Matching, Management & Launch" (8 issues, 1 closed) each issue scoped narrowly enough to map to a single branch and PR.

B. Project Board

Provide a screenshot of your GitHub Project Board with your issues organized dynamically across columns (To Do, In Progress, Done).

Caption: Board view of the same issues grouped by milestone, moving left to right through To Do → In Progress → Done as each feature branch was opened, merged, and its issue auto-closed by the PR description.

C. Branching Architecture

Provide a screenshot showing your local or remote Git branch list, highlighting your use of conventional, issue-linked naming patterns (e.g., feat/, fix/, style/).

Caption: Remote branches follow a type/issue-number-short-description convention e.g. feat/2-html-layout, style/3-design-system, refactor/23-rename-forms-module, docs/18-conflict-evidence so each branch name alone identifies its purpose and the issue it closes.

D. Pull Requests & Traceability

Provide a screenshot of a completed or open Pull Request (PR) on GitHub that clearly shows it is linked to a related development issue.

Caption: PR #11 ("feat: my reports") shows "Closes #13, Closes #14" in the description, so merging the PR automatically closed both linked issues visible in the PR's linked-issues sidebar on GitHub.

5. Merge Conflict Evidence

Tracking issue for this work: <https://github.com/IS-PROJECT-2026/campusfind-134706/issues/37>

Three conflicts, three different causes:

- **Conflict 1** - same-line content conflict (two branches edited the same CSS declaration differently)
- **Conflict 2** - rename/modify conflict (one branch renamed a file, the other modified the old path)
- **Conflict 3** - modify/delete conflict (one branch deleted a file, the other modified it)

Conflict 1 - Full Chronology

What cause did you use? Same-line / content conflict - two branches changed the identical line of `css/variables.css` to different values.

- **Branch A:** `style/21-header-blue-theme` → <https://github.com/IS-PROJECT-2026/campusfind-134706/commit/1f7e0a20d2bbbf72ad04f9759407bb18c876830c> (style: darken primary blue theme colour), merged into main via <https://github.com/IS-PROJECT-2026/campusfind-134706/pull/15>
- **Branch B:** `green-theme branch` → <https://github.com/IS-PROJECT-2026/campusfind-134706/commit/248d4c7c4fab99bf40459884da1b6f843117dbec> (style: switch primary colour to green theme)
- **Resolution merge commit:** <https://github.com/IS-PROJECT-2026/campusfind-134706/commit/4b733cb69d9c33decacc9283f1cfe7ed7cfeaa77> (fix: resolve primary colour conflict keeping blue theme)

Step 1: Generating the Clash

Screenshot showing the merge attempt and the conflict warning.

Caption: Merging the green-theme branch (248d4c7) into main after style/21-header-blue-theme (PR #15) had already changed the same line - Git reported a conflict in css/variables.css because --color-primary was set to two different hex values on each side.

Step 2: Inside the Code Editor (Conflict Markers)

Screenshot showing the raw, unresolved conflict markers in your editor.

50       <h2>FAQ</h2>
51
52       <div class="faq-item">
```

Caption: main had --color-primary: #1d4ed8 (darkened blue) while the incoming branch had --color-primary: #059669 (green); the incoming branch also flipped --color-secondary to blue. I kept the blue theme as primary since it matched the rest of the already-merged design system and reassigned green to secondary use elsewhere.

Step 3: Resolution & Clean Merge

Screenshot of your clean Git history or completed PR showing the conflict was resolved and merged.

Caption: Final state after commit 4b733cb: css/variables.css keeps --color-primary: #1d4ed8 (blue) and --color-secondary: #1d4ed8, with the conflict markers removed and the merge committed cleanly to main.

Conflict 2 - Different Cause

What cause did you use? Rename/modify conflict.

Why does this cause trigger a conflict? One branch (refactor/23-rename-forms-module) renamed js/forms.js to js/report-forms.js (<https://github.com/IS-PROJECT-2026/campusfind-134706/commit/78326413340767e24d17d3a0c764c196d2e34b5c>, merged via PR #16), while another branch kept editing content under the old path js/forms.js (feat(forms): add validation summary helper message, <https://github.com/IS-PROJECT-2026/campusfind-134706/commit/445b480191c1684c94132d649afa4c9be3f707e4>). Git can't automatically decide whether the new edits belong in the renamed file or the deleted original, so it flags a rename/modify conflict. Resolved in: <https://github.com/IS-PROJECT-2026/campusfind-134706/commit/99f459c658c879832bee29bcc27b39bcfdad2ee5>

Caption: js/forms.js no longer existed on main (renamed to js/report-forms.js), but the feature branch still modified it - resolved by merging the new validation-summary helper into js/report-forms.js and deleting the stale js/forms.js.

Conflict 3 - Different Cause

What cause did you use? Modify/delete conflict.

Why does this cause trigger a conflict? chore/25-remove-about-page deleted about.html and its nav links (<https://github.com/IS-PROJECT-2026/campusfind-134706/commit/07604d80f817d1d0dd1ea6eec857fead28719cbd>, merged via PR #17), while another branch was simultaneously expanding that same file with a new "Getting Started" section (<https://github.com/IS-PROJECT-2026/campusfind-134706/commit/935ade36266d2b21f065a6ea36fc315200d98176>). Git can't reconcile "delete this file" on one side with "here are new edits to it" on the other, so it surfaces a modify/delete conflict. Resolved in: <https://github.com/IS-PROJECT-2026/campusfind-134706/commit/beed6c42f94c8cadfe8a980d0e102048c2fae2ad>

Caption: Chose to keep the expanded `about.html` rather than the deletion, then restored the nav link back into `index.html`, `browse.html`, `item.html`, `my-reports.html`, `report-found.html`, and `report-lost.html` so navigation stayed consistent across all six pages.
